

SISTEMA DI RACCOMANDAZIONE

Prodotti cosmetici su similarità multidimensionale

*«La similarità deve riflettere
ingredienti, brand e categoria,
non solo il nome del prodotto.»*

CONTESTO

Il mercato cosmetico presenta un'elevata varietà di prodotti apparentemente simili ma con composizioni chimiche molto diverse.

I sistemi di raccomandazione tradizionali si basano spesso su descrizioni testuali o strategie di marketing, trascurando la reale formulazione del prodotto.

Questo approccio può portare a suggerimenti poco coerenti dal punto di vista funzionale e qualitativo.

OBIETTIVO

Sviluppare un sistema di raccomandazione in grado di identificare prodotti cosmetici realmente simili a un prodotto di partenza.

DATASET

Il dataset utilizzato proviene dalla piattaforma **OpenFoodFacts** ed è stato filtrato per includere esclusivamente prodotti cosmetici.

Il dataset originale è composto da circa **60.000 prodotti** e presenta dati grezzi, rumorosi e non normalizzati.

Prima dell'analisi è stata effettuata una fase approfondita di **pulizia e ristrutturazione** dei dati.

4	5054563010278	0.666667	1.0

SIMILARITA' INGREDIENTI

1. Ingredienti di ciascun prodotto vengono aggregati e trasformati:

- colonna con tutti gli ingredienti
- colonna con lista di attivi funzionali

Ogni prodotto descritto come un vettore di frequenze degli ingredienti

2. Calcolata similarità Jaccard tra prodotto ricercato e candidati

Si ottiene una misura quantitativa della somiglianza tra i prodotti

RISULTATO

Una matrice 1xK con i soli prodotti della **medesima categoria** e con **identici attivi funzionali**

SIMILARITA' BRAND

1. Confronto tra brand

2. Confronto tra segmenti di mercato

Prodotti appartenenti allo **stesso brand** ricevono il **punteggio massimo: 1.0**.
Se il **segmento** è lo stesso, al punteggio viene aggiunto un **incremento** di 0.5 per rafforzare l'affinità tra prodotti simili.

CALCOLO

Attraverso una funzione deterministica basata su **regole di business** e di **matching**, considerando criteri di **uguaglianza**.

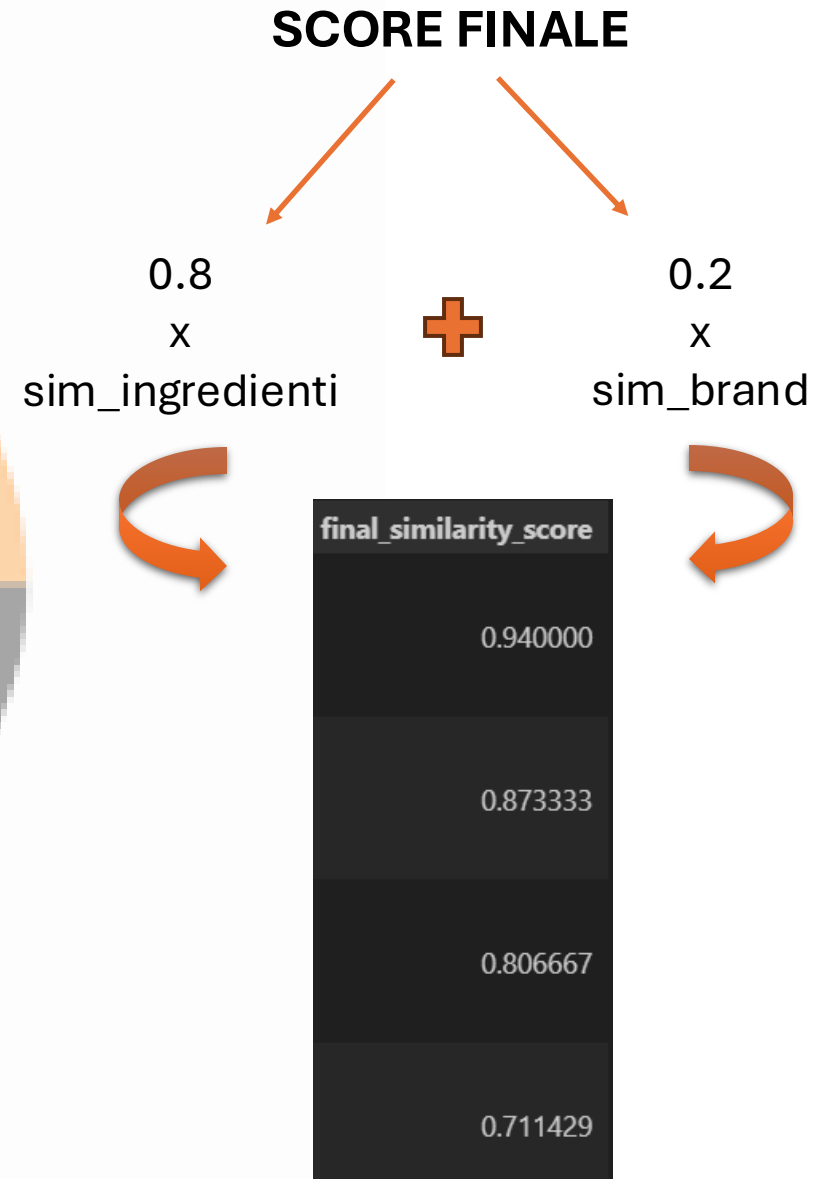

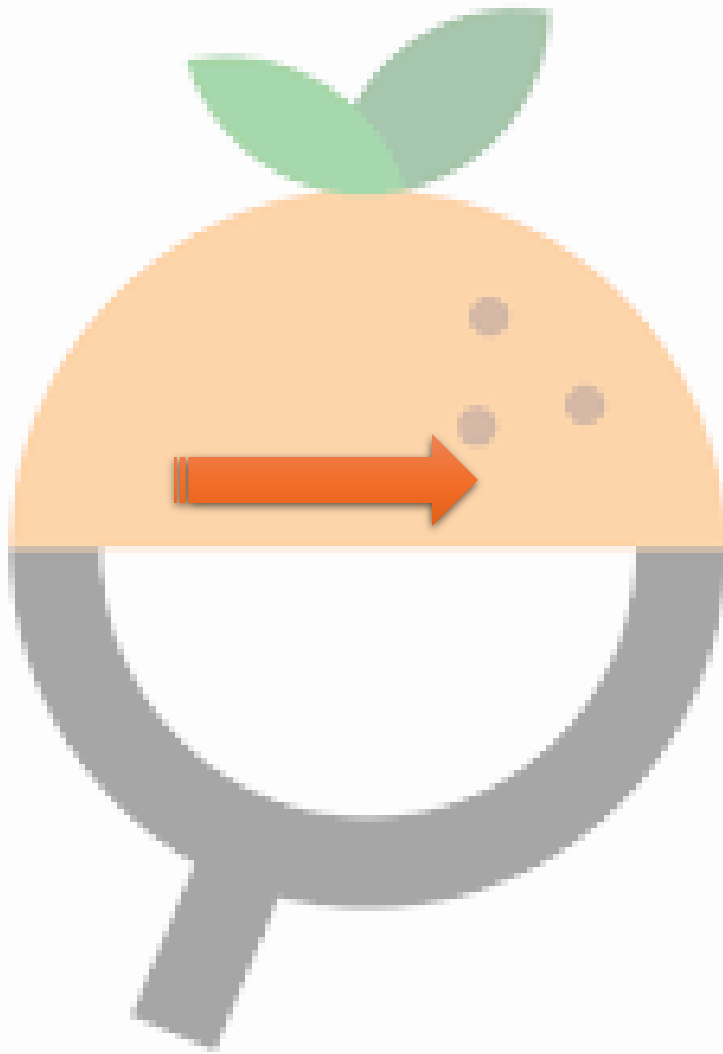

RISULTATO

Una matrice 1xK che confronta il prodotto di partenza con gli altri prodotti della **stessa categoria** producendo un risultato chiaro ed interpretabile.
